

DataKeeper

Online Corporate Backup

Secure, Encrypted, Reliable Corporate Data Backup.

Advantages of DataKeeper over Tape Backup:

- ▶ Faster Backup – No requirement to back up all data every day – just the changes
- ▶ Faster Restore
- ▶ More secure – DataKeeper encrypts the data backup using military grade encryption
- ▶ Encryption and decryption is only performed on your machine with your password, which will not be transmitted during uploading and downloading. Therefore, nobody can read the data except you
- ▶ Backups not limited by the size of tape drives or tapes
- ▶ Choice of retention period
- ▶ No requirement to change the tape daily
- ▶ Backup notifications to the end user
- ▶ Backup notifications checked daily
- ▶ Possible to have multiple backups per day
- ▶ Manual backup or restore can be done in just a few clicks when required
- ▶ Backups are kept offsite in a secure Data Centre
- ▶ More cost effective than tape

DataKeeper Online Corporate Backup is a comprehensive data protection system. **DataKeeper** offers an easy-to-use and reliable backup solution to ensure that important business and personal data is protected and is readily available when needed.

The virtue of backups is to make copies of critical data so that these additional copies can be used to restore the original following a data-loss disaster. With **DataKeeper** online corporate backup, data will be copied, compressed, encrypted and finally uploaded to a remote server (through Secure Sockets Layer (SSL)) located offsite at Western Australia's premier Data Centre, Perth IX. This backed up data is 100% restorable to its original format, when needed, by simply clicking a few buttons.

In addition, **DataKeeper** online corporate backup provides another level of protection by allowing replication of the remote backup server(s) to another remote location. As a result, the security level is doubled. Simply put, **DataKeeper** is truly a great tool that offers our customers immensely valuable assistance in carrying out the important function of data backup.

Our seed load and in-file delta technologies enable backup of a large volume of data to be completed in a very short period of time. The seed load feature allows backup of the large volume of data to a local hard drive. With our proprietary in-file delta technology, the original file is required to be backed up once only, i.e. in the first backup job. Subsequently, only the changes within the file made since the previous backup are necessary to be backed up

Microsoft Exchange is one of the most popular email servers used by businesses of any size. **DataKeeper's** built-in Microsoft Exchange Backup Module allows your customers to back up all critical data within Microsoft Exchange Server, including individual email, calendar, and contact list, etc. This capability makes **DataKeeper** an ideal backup tool for Microsoft Exchange Server.

Once **DataKeeper** online corporate backup is deployed in your company, your invaluable data is protected from fire, vandalism, terrorist attacks, war and natural disasters, etc. While the cost of **DataKeeper** is limited, the value of critical business data it protects is not.
